## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, 37 and 38 drawn to a method of treating or preventing hair loss, classified in class 514, subclass 880.
  - II. Claims 15-20 drawn to a method of treating vitiligo, classified in class 514, subclass 828.
  - III. Claims 21-36 drawn to a method of treating or preventing acne and acne scars, classified in class 514, subclass 859.
  - IV. Claims 39-40, drawn to a method for treating a skin or hair condition associated with the activation of the innate immune system, classified in class 514, subclass 885.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case the different inventions have different functions. Each of the inventions treats a different condition for in a patient. Patient one suffers a Hair loss condition. Patient two has vitiligo. Patient three has acne or acne scars. Patient four has skin or hair condition associated with the activation of the innate system (note that skin problems related to the innate immune system are not limited to acne and/or vitiligo, for example

Art Unit: 1618

eczema and psoriasis are skin disease that is related to the same system and also there are other hair problems related to the innate immune system such as hair hypopigmentation, accordingly claims 39, and 40 are considered as a different group because the claims include further problems). Since the patients for each method of treatment do not have to be the same patient, this shows that the inventions are distinct.

2. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. A telephone call was made to Ms. Maya Skubatch on 1/18/2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 1618

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
